DETAILED ACTION

Allowable Subject Matter

1. Claims 1 and 6 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The prior art of record neither discloses nor teaches a liquid crystal display device comprising various elements as claimed, more specifically, as the following:

the first and second electrodes being provided outside a display area in which transmission of an optical beam is turned on and off; and a first projection provided on the first electrode, a second projection provided on the second electrode, the first and second projections inducing the pre-tilt angle in the liquid crystal molecules located adjacent to the first and second projections; so that forming a first region in the molecular alignment film in correspondence to the first electrode and a second region in the molecular alignment film in correspondence to the second electrode by ultraviolet irradiation and inducing the pre-tilt angle in the liquid crystal molecules adjacent to the first and second regions, and as shown in Fig.5 [claims 1 and 6].

The closest references AAPA, US 5,907,380 (Lien), US 6,177,973 (Lee et al) and US 6,344,883 (Yamada et al) disclose a structure of a liquid crystal display device in which two projections (or convex portions) are provided on the different electrodes in order to improve the response speed and the viewing angle for a vertical alignment mode display, but the references do not teach the two different electrodes being provided outside of the display area and inducing a pre-tilt angle in the two projections as claimed in the claims 1 and 6 and such as shown of the Fig.5.
